# MICHAEL BEAMISH
## SOFTWARE DEVELOPER

## Summary

Hello! My name is Mike. I have just spent all of last year learning full-stack web development. Although there is still much to learn I am ready and excited to begin my new career in tech.

## Projects

### Satellite Tracker
Sept. 2018

For my first quarter project at Galvanize I built a satellite tracker using NodeJS, HTML, Bootstrap, Axios, and several different APIs.

### Backpack Inventory App
Oct. 2018

This was our quarter two group project at Galvanize. We built an app that keeps track of who is bringing what on a camping trip. We used NodeJS, Express, PostgreSQL, HTML, and Bootstrap.

### Battleship Game
Nov. 2018

My third quarter project at Galvanize was the game Battleship. I built it using React, Redux, Firebase, and Materialize.

### Love Letter Game
Dec. 2018

This is my favorite project. During our breaks at Galvanize we would play the card game Love Letter. I decided to build it using React, Redux, and Firebase so that we could play online.

## Employment

### TA and Part-Time Instructor (full-stack web development)
Phoenix, AZ
**Tech Talent South**
Mar. 2018 to May 2018

After a few computer science classes at Mesa Community College I decided to expedite the process of learning to code. I signed up for a web development boot camp at Tech Talent South. Once I graduated I volunteered to be a teacher's assistant for the next cohort. Within a couple weeks I was asked to teach every other class on my own. The curriculum covered HTML, CSS, JavaScript, Ruby, Rails, and SQLite. Because I had just graduated myself this required extensive studying and lesson planning before each meetup. Although it was difficult, it helped reinforce what I had learned and prepared me for my time at Galvanize.

### Climbing Coach / Pool Boy
Scottsdale, AZ - Phoenix, AZ
**AZ On The Rocks & Island Time Pools**
May 2016 to Jan. 2018

After I stopped handling insurance claims I spent the next year and a half working as a coach for a youth climbing team and then as a pool cleaner. This allowed me time to attend classes at Mesa Community College. This is also when I discovered I enjoyed programming.

### Insurance Adjuster
Tempe, AZ - Phoenix, AZ - Mobile, AL
**State Farm, Ameriprise & Pilot Catastrophe Services**
Sept. 2008 to May 2016

Almost right out of high school I began working as an assistant to an insurance adjuster. This eventually lead to me becoming one myself. I handled insurance claims for almost eight years. My job required me to travel to parts of the US where natural disasters had occurred. I would be there for months at a time. Although I truly enjoyed my job I decided it was best to seek local work when I met Jessica, who is now my wife. It would take a couple years and a few miscellaneous jobs to discover what I really wanted to do, but this is what lead to me learning programming.
