MICHAEL BEAMISH
SOFTWARE DEVELOPER

Summary

Recently graduated software development student with a background handling insurance claims. I still have much to learn but I am ready to begin my new career in tech.

Projects

Satellite Tracker
Sept. 2018

For my first quarter project at Galvanize I built a satellite tracker using NodeJS, HTML, Bootstrap, Axios, and several different APIs. (link in portfolio)

Backpack Inventory App
Oct. 2018

This was our quarter two group project at Galvanize. We built an app that keeps track of who is bringing what on a camping trip. We used NodeJS, Express, PostgreSQL, HTML, and Bootstrap. (link in portfolio)

Battleship Game
Nov. 2018

My third quarter project at Galvanize was the game Battleship. I built it using React, Redux, Firebase, and Materialize. (link in portfolio)

Love Letter Game
Dec. 2018

This is my favorite project. During our breaks at Galvanize we would play the card game Love Letter. I decided to build it using React, Redux, and Firebase so that we could play online. (link in portfolio)

Employment

Tech Talent South
Phoenix, AZ

TA and Part-Time Instructor (full-stack web development)
Mar. 2018 to May 2018

After graduating from Tech Talent South I volunteered to be a teachers assistant for the next cohort. Within a couple weeks I was asked to teach every other class on my own. The curriculum covered HTML, CSS, JavaScript, Ruby, Rails, and SQLite. Because I had just graduated myself this required extensive studying and lesson planning before each meetup. Although it was difficult, it helped reinforce what I had learned and prepared me for my time at Galvanize.

AZ On The Rocks
Scottsdale, Az

Climbing Coach / Route Setter
May 2016 to Jan. 2017

Climbing is one of my favorite hobbies. When I decided to pursue a career in software development I took a job as a coach for a youth climbing team. This allowed me more time to begin teaching myself to code.

Claim Representative
Tempe, AZ, Phoenix, AZ, and Mobile, AL

State Farm, Ameriprise, and Pilot Catastrophe Services
Sept. 2008 to May 2016

As an insurance adjuster I handled home and auto claims both in the field and in a call center environment. I would make initial contact with the customers to discuss their policy and coverage, schedule appointments, inspect the loss, determine coverage, and issue payments.
